

**Trading Strategy: Discretionary Trading**

**Program Description:** The program focuses primarily on domestic agricultural commodity futures and options with emphasis on wheat, corn, soybeans, and soybean products. She may on occasion trade other Ag related markets. The program is traded by Megan Bocken. Megan gained a thorough understanding of the grain trade by helping to service commercial grain accounts including both users and producers, and by studying the fundamentals of the grain markets as a research analyst. She currently maintains her own research focusing on wheat, corn, and soybeans placing special emphasis on relationships among the different classes of wheat. This includes forecasting both US and world supply and demand of each particular commodity in order to determine "value" and price trends based on ever- changing market conditions. It also involves a careful and constant monitoring of US and world weather, geopolitical issues, and currency relationships. By combining the factors, Megan is able to make trading decisions that integrate flat price, intra and inter market spreads as well as options strategies.
